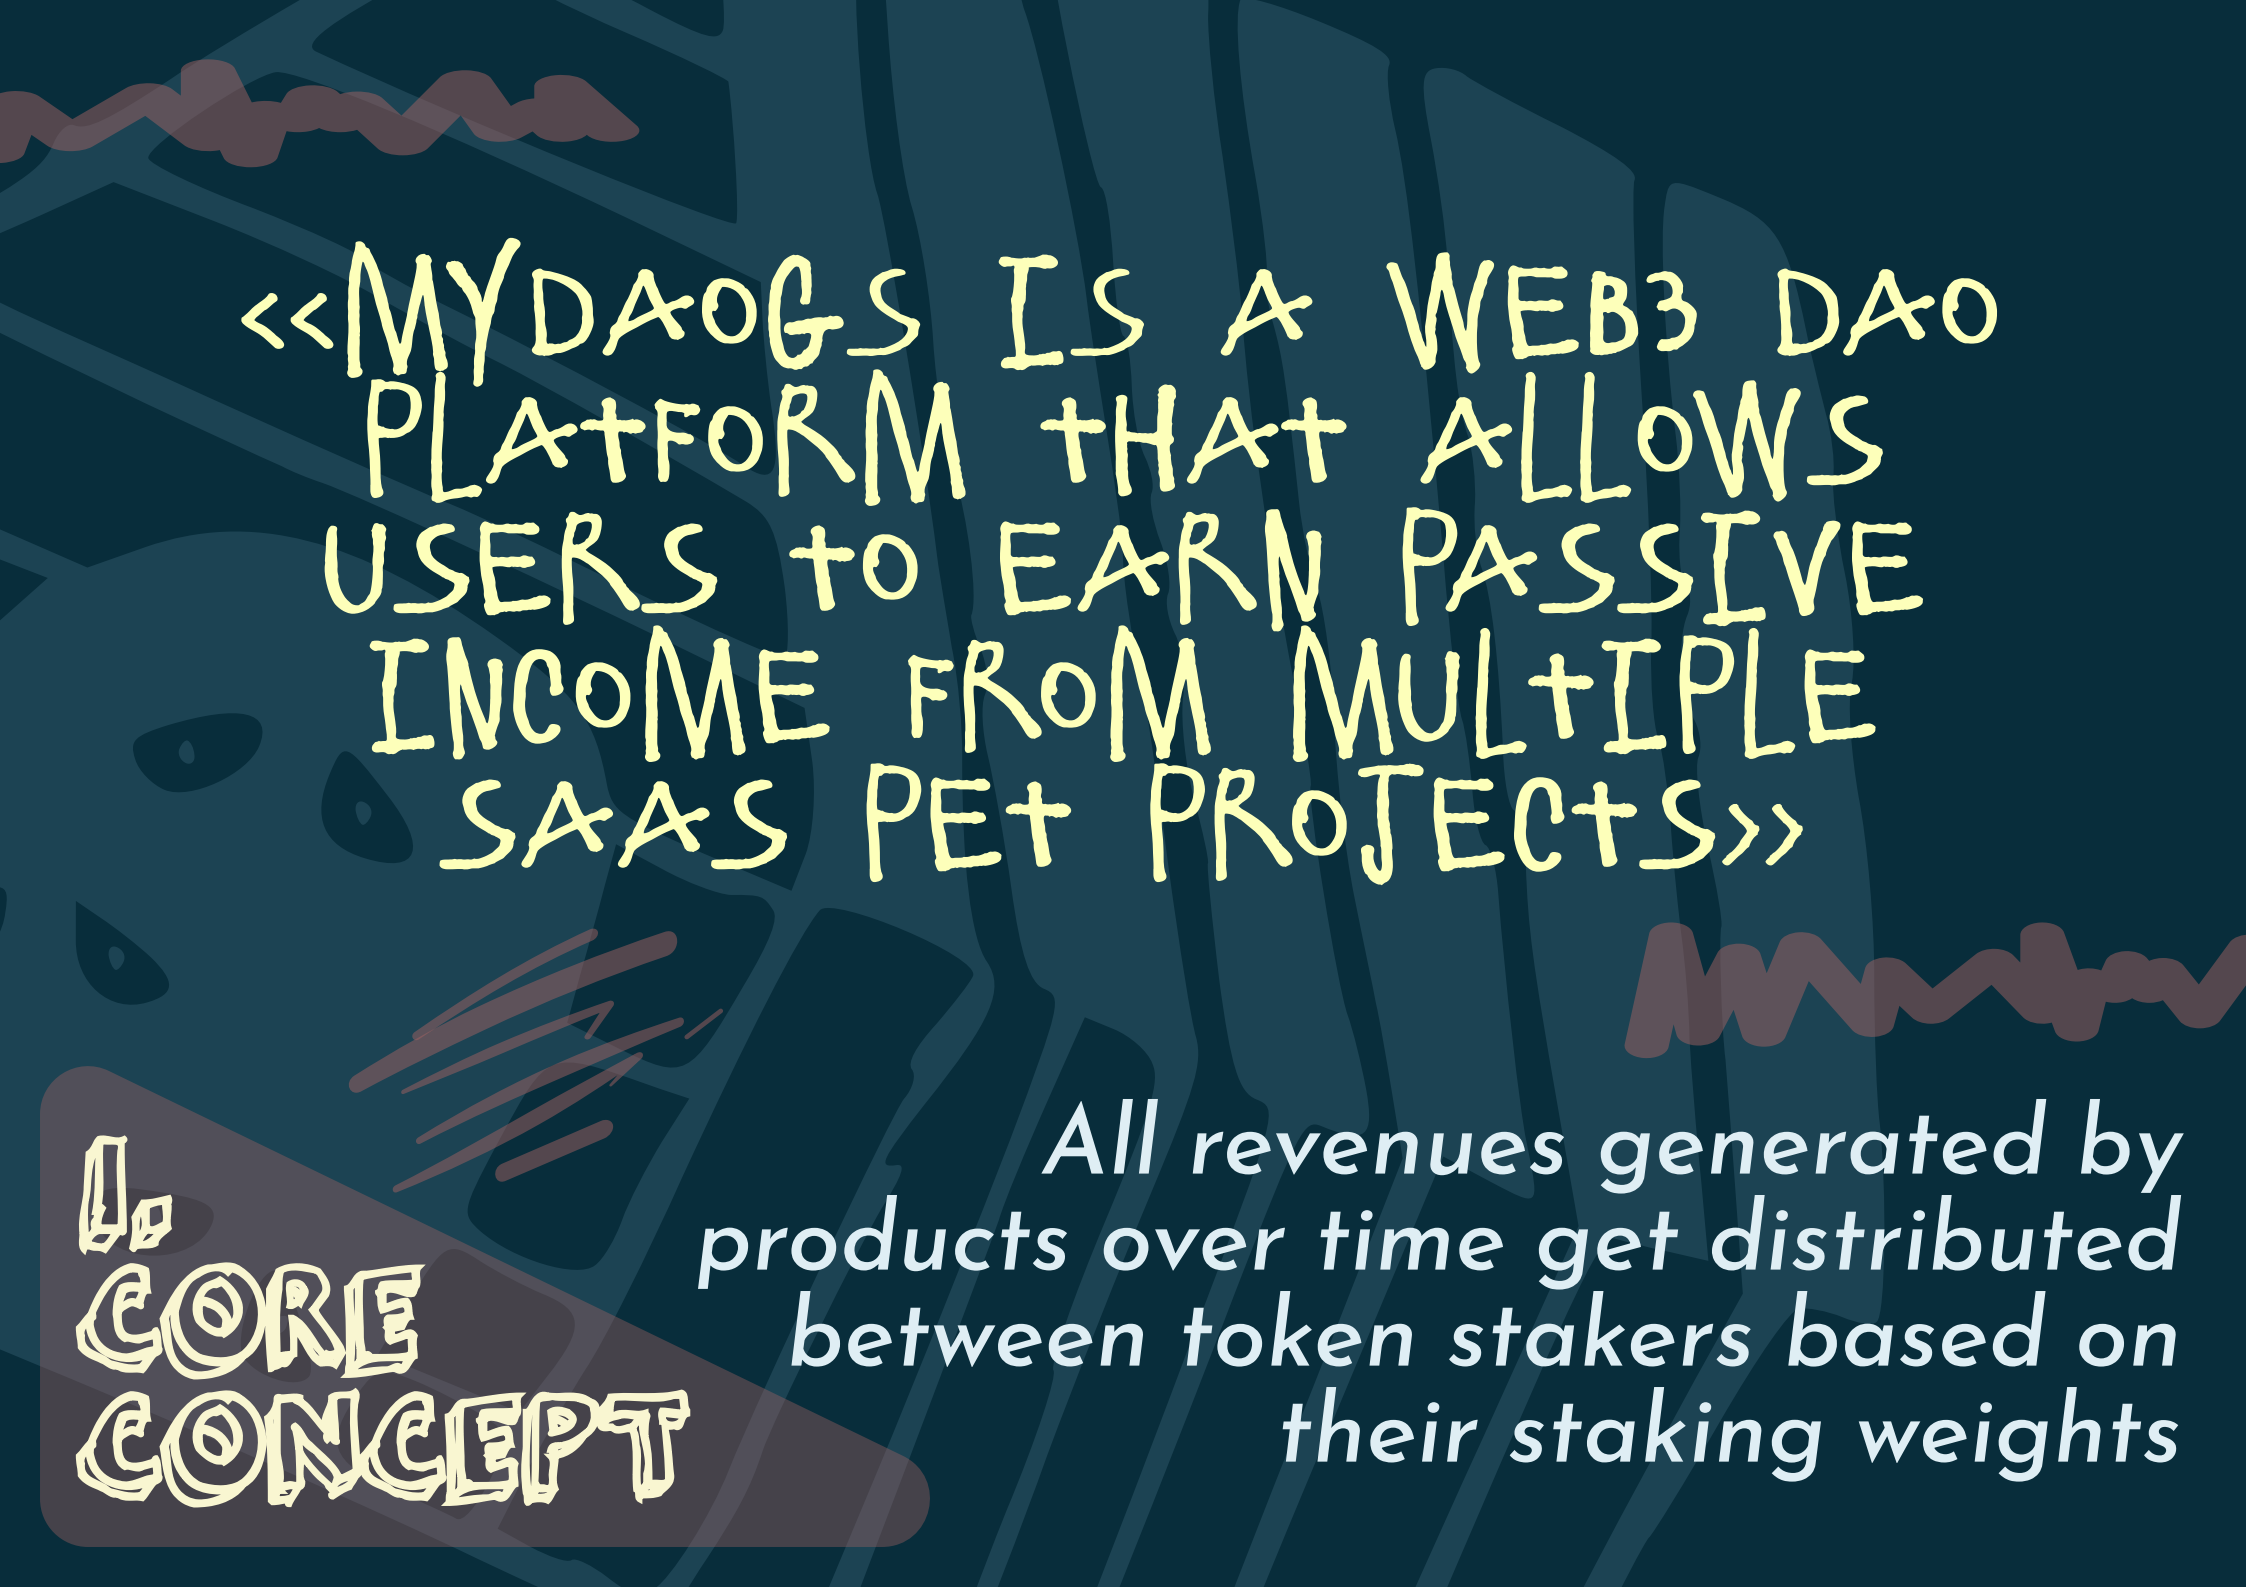
MyDaogs

LITEPAPER

VERSION 1.0.1



«MYDAOGS IS A WEB3 DAO PLATFORM THAT ALLOWS USERS TO EARN PASSIVE INCOME FROM MULTIPLE SAAS PET PROJECTS»
1. CORE CONCEPT
All revenues generated by products over time get distributed between token stakers based on their staking weights

THERE ARE MULTIPLE WAYS OF EARNING WITH MYDAOGS:

- Stake tokens and receive **dividends** from products in USDT as well as **staking rewards** in native tokens

- Revolutionary **SafeExit** mechanism to sell with guaranteed profits before CEX&DEX listings

- Competition for a bigger staking weight potentially leads to **token price** growth

02. EARNING STRATEGIES

IV. DIVIDEND DISTRIBUTION

TECHNICAL INFO V.

MyDAOgs infrastructure has over 10 Solidity contracts syncing together:

(SYSTEM CONTRACT [administration]; TOKENS CONTRACTS [OMYG, MYG]; DIVIDENDS COLLECTOR CONTRACT; STAKING CONTRACT; SALES CONTRACTS [PRIVATE, PUBLIC, AIRDROP]; PRODUCT CONTRACTS [NUMBER IS GROWING]; MAINTENANCE CONTRACT [system costs])

Thus, security audits are needed to ensure the system is safu.

For this reason, the system is designed in two split parts so the first part is deployed on the mainnet to complete the Presale (OMYG token), then the second main part will be deployed once all audits are complete and tokens get swapped to MYG in 1:1 rate. All contracts are already deployed and fully available on the testnet from the very beginning so users can interact and test it out.

TOKENS

USD[T,C,...]

*Dividends are paid off in the same token that the products are charging users. We thought of flexibility and made sure you can receive payouts in different tokens

MYG

*Main ecosystem token used for staking and staking rewards, maintenance costs payouts and trading on the exchanges

OMYG

*Presale token for early adopters, sold for the cheapest possible price, it will later get swapped to MYG
